Kirk Erectors Inc.
Cooling Tower Specialists 365

Constructing Quality With Pride.

Safety.

At Kirk Erectors, we understand that accidents can be prevented. Through proper project planning, employee training and cooperative efforts during all phases and in all areas of our operations we are diligently striving to improve our work environment. Though we believe our safety program to be very effective, we also recognize that as long as any possibility exists for even one person to suffer injury, we must continue to stress safety awareness through our management and at each and every project site for continued improvement.

Our managers and superintendents are responsible for the implementation of safe work procedures and maintenance of a project site free from hazards to eliminate occupational injuries and illnesses, damage to equipment and property, as well as to protect the general public.

Memberships.

Cooling Tower Specialists **365.**

Any company can staff an industrial construction project. Right?

Not always. The most crucial step in delivering a project on schedule and within budget is to ensure the project is properly staffed with skilled craft personnel. Some companies trust the staffing of cooling tower projects with unqualified and inexperienced workers found through temporary agencies who may be unfamiliar with their product and construction techniques.

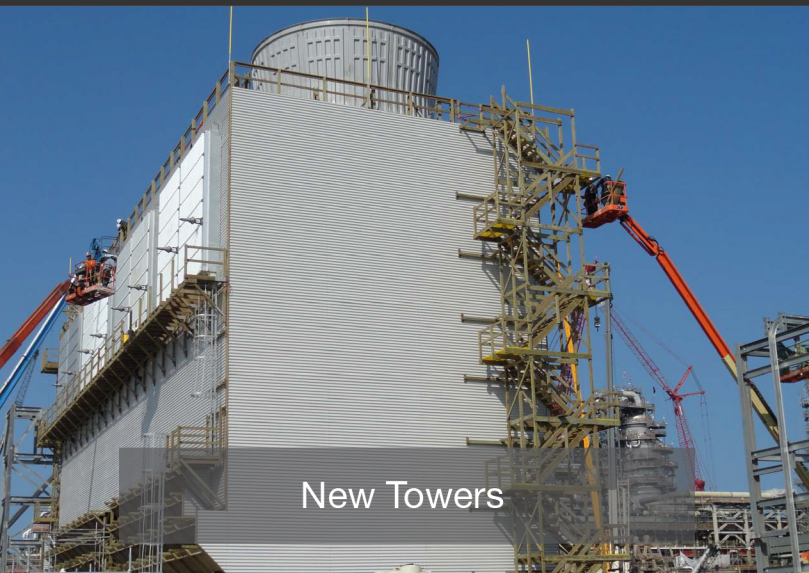

Kirk Erectors understands our reputation is on the line with every opportunity we engage in. We provide quality construction services nationwide by accessing regional, skilled craft personnel through our building trade partnerships and national maintenance agreements.

Our top priority to our customers is to provide union craft personnel trained in proper erection procedures of cooling tower construction. This ensures we get the work done safely, efficiently, economically and on schedule – from quick turnarounds to major upgrade programs for industrial related facilities throughout North America.

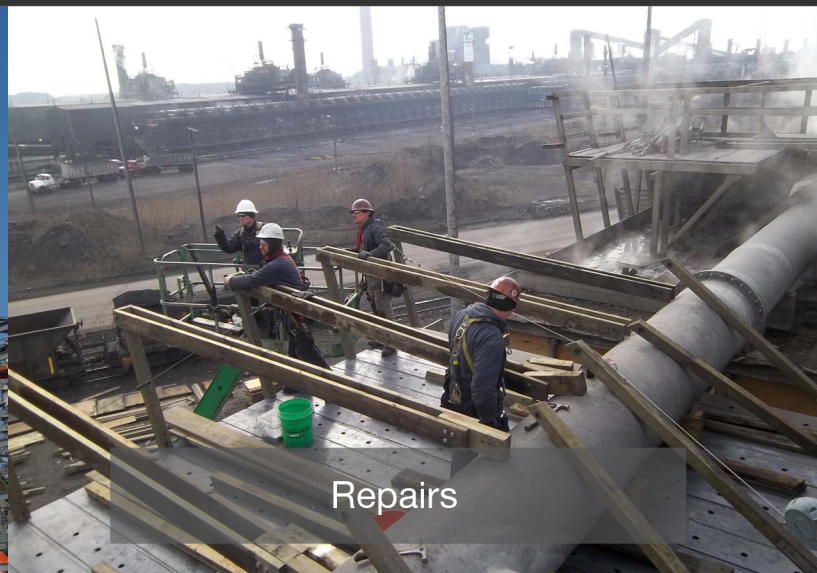

Kirk Erectors is truly a competitive resource when it comes to assisting clients in performing ongoing industrial maintenance services with minimal disruption.

- **Superintendents Career Training Program**
